

**Executive Office of the President (EOP)**  
**Comments on the Interagency Science Discussion**  
**Draft IRIS Toxicological Review of Perfluorohexanoic Acid (PFHxA) and Related Salts**  
**February 2023**  
(Date Received March 7, 2023)

---

EOP reviewers agree that this was a well-done assessment and that they adequately incorporated peer review and public comment feedback. The current draft is easy to follow and lays out EPA's decision-making process. It appears that EOP comments from the prior round were addressed.

We have one minor suggestion on page xvi, Table ES-1: Though a more complete explanation of the uncertainty factors are given in Table 5-6, please define the UFs in the footnotes here at first instance of use. The acronyms are not intuitive for a new reader. We suggest that EPA provide definitions in the footnote that UFA = interspecies extrapolation, UFH = interindividual variability, etc., but defer to the agency for best placement of the definitions.
