

TOXICS RELEASE INVENTORY

List of Toxic Chemicals within the Ethylenebisdithiocarbamic Acid, Salts and Esters Category and List of Mixtures that Contain the Individually Listed Chemicals Maneb, Metiram, Nabam, and Zineb

Section 313 of the Emergency Planning and Community Right-to-Know Act of 1986 (EPCRA) requires certain facilities manufacturing, processing, or otherwise using listed toxic chemicals to report the annual quantity of such chemicals entering each environmental medium. Such facilities must also report pollution prevention and recycling data for such chemicals, pursuant to section 6607 of the Pollution Prevention Act, 42 U.S.C. 13106. EPCRA section 313 is also known as the Toxics Release Inventory (TRI).

DISCLAIMER

This guidance document is intended to assist industry with EPCRA section 313 reporting for the ethylenebisdithiocarbamic acid, salts and esters category and the individually listed chemicals maneb, metiram, nabam, and zineb. In addition to providing an overview of aspects of the statutory and regulatory requirements of the EPCRA section 313 program, this document also provides recommendations to assist industry with EPCRA reporting. These recommendations do not supersede any statutory or regulatory requirements, are subject to change, and are not independently binding on either EPA or covered facilities. Additionally, if a conflict exists between guidance on this site and the statutory or regulatory requirements, the conflict must be resolved in favor of the statute or regulation.

Although EPA encourages industry to consider these recommendations, in reviewing this document, industry should be aware that these recommendations were developed to address common circumstances at typical facilities. The circumstances at a specific facility may significantly differ from those contemplated in the development of this document. Thus, individual facilities may find that the recommendations provided in this document are inapplicable to their processes or circumstances, and that alternative approaches or information are more accurate and/or more appropriate for meeting the statutory and regulatory requirements of EPCRA section 313. To that end, industry should use facility specific information and process knowledge, where available, to meet the requirements of EPCRA section 313. EPCRA section 313 also provides that, in the absence of such readily available data, a reporting facility may make reasonable estimates to meet those EPCRA section 313 requirements. Facilities are encouraged to contact the Agency with any additional or clarifying questions about the recommendations in this document, or if the facility believes that EPA has incorrectly characterized a particular process or recommendation.

Additional guidance documents, including industry specific and chemical specific guidance documents, are also available on TRI's GuideME website:

SECTION 1.0 INTRODUCTION

On November 30, 1993, EPA added 21 chemicals and 2 categories to the list of toxic chemicals under section 313 of the Emergency Planning and Community Right-to-Know Act of 1986 (EPCRA) (58 FR 63500). These additions are described at 40 CFR 372.65, and were effective January 1, 1994 for reports due July 1995. Ethylenebisdithiocarbamic acid (EBDC), salts and esters was included in these additions. At the time of the addition, EPA indicated that the Agency would work with the public and the regulated community to develop, as appropriate, interpretations and guidance the Agency determines are necessary to facilitate accurate reporting for these categories. This document constitutes such guidance for EBDC, salts and esters.

EPCRA section 313 requires threshold determinations for chemical categories to be based on the total of all chemicals in the category manufactured, processed, or otherwise used. For example, a facility that manufactures three members of a chemical category would count the total amount of all three chemicals manufactured towards the manufacturing threshold for that category. When filing reports for chemical categories, the releases are determined in the same manner as the thresholds. One report is filed for the category and all releases are reported on this form.

The EBDC salts and esters category is subject to the one percent *de minimis* concentration. Thus, mixtures that contain members of these categories in excess of the *de minimis* should be factored into threshold and release determinations.

Any compound which has an EBDC salt or ester component is reportable. EPA is providing in this document a list of CAS numbers and chemical names to aid the regulated community in determining whether they need to report for the EBDC category. *However, this list is not exhaustive.* If a facility is manufacturing, processing, or using a chemical which has an EBDC salt or ester component, they must report to TRI, even if this chemical does not appear on the list in this document.

In addition to the EBDC category, there are four individually listed EBDC chemicals, these are: maneb (Chemical Abstracts Service Number (CAS#) 12427-38-2), metiram (CAS# 9006-42-2), nabam (CAS# 142-59-6), and zineb (CAS# 12122-67-7). Maneb and zineb were on the original EPCRA section 313 list established by Congress while metiram and nabam were added to the list by EPA (November 30, 1994, 59 FR 61432). This document contains a list of mixtures that contain these individually listed EBDC chemicals that should be considered in any threshold and release determinations for these chemicals. Maneb, metiram, nabam, and zineb are subject to the one percent *de minimis* concentration. Thus, mixtures that contain these chemicals in excess of the *de minimis* should be factored into threshold and release determinations. These individually listed chemicals and the mixtures that contain them are not part of the EBDC category.

For general instruction regarding compliance with EPCRA section 313 requirements and form completion, please see the most recent version of the Toxic Chemical Release Inventory Reporting Forms and Instructions, available at: https://ofmpub.epa.gov/apex/guideme_ext/f?p=guideme:rfi-home.

SECTION 2.0 CAS NUMBER LIST OF CHEMICALS AND MIXTURES THAT CONTAIN THE ETHYLENEBISDITHIOCARBAMIC ACID, SALTS, AND ESTERS

EPA is providing the following list of CAS numbers and chemical names to aid the regulated community in determining whether they need to report for the EBDC category. However, this list is not exhaustive. If a facility is manufacturing, processing, or using a chemical which has an EBDC salt or ester component, they must report to TRI, even if this chemical does not appear on the following list.

SECTION 3.0 CAS NUMBER LIST OF MIXTURES THAT CONTAIN THE INDIVIDUALLY LISTED CHEMICALS MANEB, METIRAM, NABAM, AND ZINEB

EPA is providing the following list of CAS numbers and chemical names for mixtures which contain the individually listed chemicals maneb, metiram, nabam, and zineb. This list will aid the regulated community in determining whether they need to report for these chemicals. However, this list is not exhaustive. If a facility is manufacturing, processing, or using a mixture that contains any of these chemicals, they must report to TRI, even if the mixture does not appear on the following list. Threshold calculations for each of these listed chemicals should account only for the percentage of the chemical contained in the mixture.

Table 3-1: CAS Number List of Mixtures that Contain the Individually Listed Chemicals Maneb, Metiram, Nabam, and Zineb
